# Digital Billboard Creative Spec

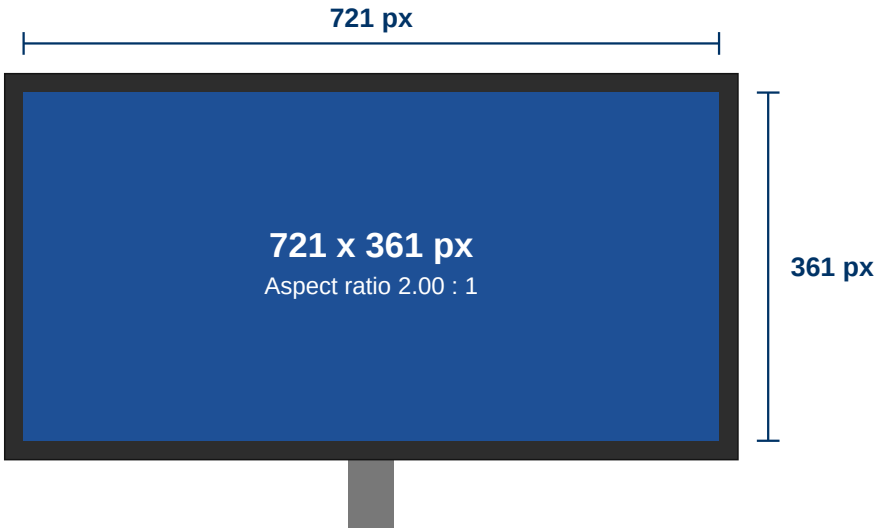

## Location ID: X-041S

coast outdoor

CALL (250) 388-3733

# 721 px W x 361 px H

Native display resolution | RGB | 72 ppi

### File Specifications for X-041S

| | |
|---|---|
| **Pixel dimensions** | **721 px W x 361 px H (exact)** |
| **Colour mode** | **RGB (not CMYK)** |
| **Resolution** | **72 ppi** |
| **File format** | **Highest quality JPEG (.jpg)** |
| **File size** | **Typically 70-150 KB** |

### Key Design & Technical Guidelines

- **The 3-Second Rule: Drivers and passersby only have a few seconds to process your message; keep text minimal and impactful (ideally 5 words or fewer).**
- **Visual Hierarchy: Structure your layout into clear levels:**
  - **Level A (Primary): Main image, brand logo, or core price/offer.**
  - **Level B (Action): Contact information, website, or location pointer.**
- **Color & Contrast:**
  - **Build files in RGB color mode (not CMYK) matching the native pixel dimensions of the specific digital billboard.**
  - **Use bright, saturated colors with strong tonal contrast.**
  - **Avoid pure white or overly bright light backgrounds, which can wash out or cause glare on LED displays.**
  - **Test contrast and readability in grayscale.**
- **File Formats & Sizing:**
  - **Save and export as highest quality JPEGs (typically sized between 70-150 KB) at 72 ppi (dpi) resolution.**
  - **Always verify the exact pixel resolution of your production-ready digital creative. For this display: 721 px W x 361 px H.**
